

## Anah Kruschke Rhododendron

*Rhododendron 'Anah Kruschke'*

Height: 5 feet

Spread: 5 feet

Sunlight:

Hardiness Zone: 5b

### Description:

Full trusses of lovely reddish-purple flowers in late May and early June with sturdy dark green leaves retained all year; this variety copes well with sun and heat; it is vigorous and upright, ideal for a shrub border; must have acidic and organic soil

### Ornamental Features

Anah Kruschke Rhododendron is smothered in stunning clusters of lightly-scented purple trumpet-shaped flowers with burgundy spots at the ends of the branches in late spring. It has dark green foliage. The glossy narrow leaves remain dark green throughout the winter. The fruit is not ornamentally significant.

### Landscape Attributes

Anah Kruschke Rhododendron is an open multi-stemmed evergreen shrub with an upright spreading habit of growth. Its relatively coarse texture can be used to stand it apart from other landscape plants with finer foliage.

This is a relatively low maintenance shrub, and should only be pruned after flowering to avoid removing any of the current season's flowers. It has no significant negative characteristics.

Anah Kruschke Rhododendron is recommended for the following landscape applications;

- Accent
- Mass Planting
- General Garden Use

### **Planting & Growing**

Anah Kruschke Rhododendron will grow to be about 5 feet tall at maturity, with a spread of 5 feet. It tends to be a little leggy, with a typical clearance of 1 foot from the ground, and is suitable for planting under power lines. It grows at a slow rate, and under ideal conditions can be expected to live for 40 years or more.

This shrub does best in full sun to partial shade. It requires an evenly moist well-drained soil for optimal growth, but will die in standing water. It is very fussy about its soil conditions and must have rich, acidic soils to ensure success, and is subject to chlorosis (yellowing) of the leaves in alkaline soils. It is somewhat tolerant of urban pollution, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This particular variety is an interspecific hybrid.
