Spellbound Coral Bells

Heuchera 'Spellbound'

Plant Height: 10 inches

Flower Height: 18 inches

Spread: 16 inches

Spacing: 12 inches

Sunlight: ○ ◐ ●

Hardiness Zone: 4a

Other Names: Coralbells, Alumroot

Description:

This variety produces silvery leaves with pronounced, deep purple veins and red undersides; dainty spikes of cream bell flowers in late spring; foliage is more rose-purple in sunnier locations; keep soil moist in heat of summer

Ornamental Features

Spellbound Coral Bells features dainty spikes of creamy white bell-shaped flowers rising above the foliage from late spring to early summer. Its attractive lobed leaves emerge purple in spring, turning silver in color with distinctive deep purple veins and tinges of red the rest of the year.

Landscape Attributes

Spellbound Coral Bells is a dense herbaceous evergreen perennial with tall flower stalks held atop a low mound of foliage. Its relatively fine texture sets it apart from other garden plants with less refined foliage.

This is a relatively low maintenance plant, and should be cut back in late fall in preparation for winter. It is a good choice for attracting hummingbirds to your yard. It has no significant negative characteristics.

Spellbound Coral Bells is recommended for the following landscape applications;

Planting & Growing

Spellbound Coral Bells will grow to be about 10 inches tall at maturity extending to 18 inches tall with the flowers, with a spread of 16 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 12 inches apart. Its foliage tends to remain low and dense right to the ground. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years. As an evegreen perennial, this plant will typically keep its form and foliage year-round.

This plant performs well in both full sun and full shade. However, you may want to keep it away from hot, dry locations that receive direct afternoon sun or which get reflected sunlight, such as against the south side of a white wall. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. Consider covering it with a thick layer of mulch in winter to protect it in exposed locations or colder microclimates. This particular variety is an interspecific hybrid. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

Spellbound Coral Bells is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. It is often used as a 'filler' in the 'spiller-thriller-filler' container combination, providing a mass of flowers and foliage against which the larger thriller plants stand out. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
